DEALING NUMBER: CHECK-DIGIT

CHECK-DIGIT

29-10-98

Above is a sample of the new dealing barcode label to be introduced in conjunction with the Business Operations System. As you can see the label includes a check-digit. The use of a check-digit ensures that at lodgment the Registration Officer enters the correct dealing number. It eliminates 99% of operator error in this respect.

The check-digit will be entered as if it were a part of the dealing number once and once only, i.e. by the Registration Officer at the point of lodgment. The check-digit will not appear on the register, and it should not be used when identifying a dealing, accessing Filmex to obtain a dealing address, or for any other purpose whatsoever.
